

Introducing Organic Dairy Formula with DHA & ARA

Other Varieties Available

Nature's One® believes breast milk is the best organic option for a baby's first year of life. After breast milk, parents can continue providing organic nutrition with Baby's Only Organic® toddler formula. Comparable to leading brands, Baby's Only Organic® meets the nutritional requirements as defined in the FDA's Infant Formula Act. This formula is intended for a baby 12-months and older unless directed by a healthcare professional. Nature's One® recommends that parents present a leading brand comparison chart to their doctor before changing an infant's diet.

Baby's Only Organic® Offers Four Formulations

Organic Dairy Formula with DHA & ARA: Offering the ONLY formula with DHA & ARA derived from egg phospholipids. Infant formula studies conclude egg phospholipids are more easily absorbed and offer greater bio-availability than DHA currently used in leading brand infant formulas.

Organic Dairy Formula: Healthcare professionals often recommend dairy formula as it naturally contains protein and carbohydrates most similar to breast milk.

Organic LactoRelief™ Formula: This milk-based formula is intended for babies who are lactose intolerant and offers an alternative to parents who wish to avoid soy protein† in their baby's diet.

Organic Soy Formula: This soy-based formula is lactose and dairy free and appropriate when parents prefer a vegetarian diet.

† Dairy and LactoRelief™ Formulas contain milk & soy ingredients.
